Subject:

Sequence search request for 10/016,725

From:

Manjunath N. Rao

Art Unit 1652, Room 10A11 Mail Box in Room 10D 01

Phone: 306-5681

Date: 5-5-04

Please search the following as soon as possible for application with serial number 10/016725

- 1. Nucleotides 1-3958 of SEQ ID NO: 15
- 2. Nucleotides 1-3910 of SEQ ID NO:15

against all **commercial nucleic acid databases** including **issued patents database** and **pending application database** and provide **a print of all results**.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao Art Unit 1652, Room 3B81, Mail Box in Room 3C70, Remsen Building, USPTO 400, Dulany St. Alexandria, VA. Phone: 571-272-0939

NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
  Sequencing vector: M13; M77815; 100% of reads Chemistry: Dye-terminator Bia Dye; 100% of reads Assembly program: Phrap; version 0.960731 Consensus quality: 151339 bases at least Q40 consensus quality: 15517 bases at least Q20 Consensus quality: 15517 bases at least Q20 Insert size: 167000; agarose-fp Insert size: 167000; agarose-fp Quality coverage: 4.9 in Q20 bases; sum-of-contigs Quality coverage: 5.2 in Q20 bases; sum-of-contigs

requests: clonerequest@sanger.ac.uk On Sep 19, 2001 this sequence version replaced gi:14586033. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30), an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least	one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at		sequence. The true left end of clone KP11-285F16 is at 56886 in this sequence. The true right end of clone RP11-316M21 is at 2000 in this sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             59110: contig of 59110 bp in length

KEYWORDS HTG; HTGS PHASE1; HTGS DRAFT. SOURCE Lemur catta (ring-tailed lemur)	Σ	_	2 [bases I to 190784) Cheng,JF., Hamilton,M., Peng,Y., Mukhe Peng,Z., Malinov,I. and Rubin,B.M. Direct Submission	AL	Web site: http://pga.lbl.gov Center Code: PGABERR Center Project Name: Lilo Bac Clone Name: LiB2-62P23	This sequence has been compared to sequences of other species using Vista (http://www-gsd.lbl.gov/VISTA). The results can be viewed at	http://pga.lbl.gov/cgi-bin/search_cvcgd?type=n&value=SCD The order-orientation of the draft sequence was accomplished by	using: Avid (http://baboon.math.berkeley.edu/mavid), Lagan (http://lagan.stanford.edu/) and paired end information.	Funding agent: Programs for Genomic Applications (NHLBI) If the Bac Library Name is LBI to LB4, please see website	These libraries are available through the BACPAC Resources Center: http://www.chori.org/bacpac/libraryres.htm as LBNL-1 to LBNL-4.	Summary Statistics: Sequencing vector: Plasmid; pUC18	Chemistry: Dye-terminator big Dye Assembly program: Phrap version 0.990329. * NOTE: This is a "working draft' sequence. It currently * This is a "working draft' sequence. It currently * This is a "working mp, this order of the places."	* consists of a contrage, the true of the sequence record is * is not known and their order in this sequence record is * arbitrary, days between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown.	* This record will be updated with the inlished sequence * as soon as it is available and the accession number will * be preserved.	*	source 1190784 /organism="Lemur catta" /mol_type="genomic DNA" /db xref="taxon:9447"	/clone="LB2-62P23" ORIGIN	Query Match Query Match Best Local Similarity 73.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with mall sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one Mi3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given swissering with their source databases: Em. EMBL; Sw: Swissprof; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP http://www.sanger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RP11-565H13 is from the library RPCI-11.2 constructed by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 511-8. The clone may be obtained either from and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                          NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as Compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The clone sequenced to the left is RP11-1378; the clone sequenced to the right is RP11-91M5. Actual start of this clone is at base position 1 of RP11-469M7; actual end is at 190508 of RP11-469M7.

Allen SJ;

The invention describes an isolated polypeptide segment (I) whose genes

are fat regulated. (I) or the polymuclectide encoding it (II) are useful

for diagnosing the presence of or a predisposition for a disorder

containing flip or circulated genes in a subject. A composition

containing (I) or (II) is useful for treating a disorder involving fatty

containing (I) or (II) is useful for treating a disorder involving fatty

containing (I) or (II) is useful for treating a disorder involving fatty

cold regulated genes, where the disorder, escama, cardiovascular

disorders (such as hypertriglyceridemia, dyslipidaemia, atherosclerosis,

coronary artery disease, cerebrovascular disease or peripheral vascular

discase), inflammation (such as sinusitis, askima, pancreatitis,

coronary artery disease, cerebrovascular disease or peripheral vascular

coronary artery disease, cerebrovascular disease or peripheral vascular

coronary artery disease, cerebrovascular disease or peripheral vascular

coronary artery disease, cerebrovascular disease, postreatis,

corpolications, remember as sinusitis or acne), body weight disorders

complications. (I) or (II) is useful as research agent and materials for

discovery of treatments and diagnostics for a disease, particularly human

coronary action genetic polymorphism, for detecting changes in the level of

corporating genetic polymorphism, for detecting changes in the level of

control region from a gene encoding a fatty acid regulated protein Novel isolated polypeptide segment encoded by fat regulated genes, useful for diagnosing the presence of or a predisposition for a disorder involving fatty acid regulated genes in a subject.

The present sequence is that of the promoter region of the human stearoyl cof desaturase-1 (hSCD1) gene. The promoter structure is similar to that cof the mouse SCD1 promoter and contains conserved regulatory sequences of the human SCD1 promoter and contains conserved regulatory sequences for the binding of several transcription factors. Like the mouse SCD1, colesterol at the level of gene transcription. The sterol regulatory clement binding protein (SREBP) plays a role in the transcriptional clement binding protein (SREBP) plays a role in the transcriptional clements that modulate and control SCD1 expression in humans, and to clements that modulate expression of SCD1 in humans. The invention clements that modulate expression of SCD1 in humans. The invention clements of sorders or conditions relating to serum levels of triglyceride, very lipoprotein, total cholesterol, or production of secretions from memoranes, monounsaturated fatty acids, wax esters, etc. Methods for membranes, monounsaturated fatty acids, wax esters, etc. Methods for are also provided. These disorders include various skin diseases and diseases, and immune disorders as well as cholesterol disorders include various skin diseases, eye limidamiae and cantillus hypertension, neurological diseases, eye limidamiae and cantillus hypertension, neurological diseases, eye limidamiae and cantillus hypertension, neurological diseases, eye limidamiae and cantillus hypertension, neurological diseases, eye limidamiae and cantillus such estators as well as cholesterol disorders, eventual expensions and cantillus and an expension of an enditory and and an expension and cantillus such as cancer and multiple sclerosis, non-insulin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           3459 CCCAGCCCTTCCAGAGAAAAGCTCCCGACGCGGATGCCGGGCAAGGCCCAGCGGCG 3518

(HUMA-) HUMAN GENOME SCI INC.

Ruben SM; Rosen CA, Barash SC,

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 38065; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91221. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased that affect the activity of (I) by expressing inactive proteins or to cyplucleotides may be used to production of (I). Additionally, (I) cyplurcleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and oulturing the cell to express the proteins and polynucleotides may be used to prevent, cancers and cancer metastases of haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 concers from the present invention. AAK54942 to AAK54950 and AAM82169 very represent suggestion the exemplification of the present invention.

The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition; (b) diagnosing abnormal rate of osteoblast formation or deposition of bone tissue, abnormal rate of osteoblast formation or cled in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteoporia, osteodystrophy, drug-cinvolve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastcoytosis, Fanconi syndrome cor fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated cDNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO car fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA.and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of exidoreductases, transferases, hydrolases, lyases, isomerases or ligasee. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. avide range of clasorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthma), cartivitis), neurological disorders (e.g. AIDS) autoimmune disorders (e.g. arthma), cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. themophilia), reproductive disorders (e.g. infectious disorders (e.g. influenza). The polymucleotides of the invention can also be used in gene therapy. AAS41685-AAS42192 represent invention as a lso be used in gene therapy. AAS41685-AAS42192 represent DNA sequences encoding for the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of form with a princed specification, which was obtained in electronic format directly from with a part of fram with a few min and a few min and a few man dispective dispersent format directly from with a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few min and a few mi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6292
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6232

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1729 AATAAATCTTAGAATCCAAATCAGTGTGTTGGTTTGACCACTGTCACTTGAGAACCACAG 1788
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1969 TCTCTACTAAAAATACAAAAATTAGCTAAGTGTGGTGGCGCATGCCTGTAATCCCAGCT 2028
                                                                                                                                                                                                                                                                                                                                                                                                                                  The present genomic sequence is that of human pituitary adenylate cyclase activating polypeptide (PACAP). This gene is localised to the short arm of chromosome 18p11 and synthesised in the retinal ganglion cells. The gene missed that is isolated from lymphocytes of individuals. The coding region of the gene has a dinucleotide repeat polymorphism marker known as W1440 and am STS marker, ADCYAP1 is located in the 3'UTR. These markers are useful to map the gene physically and genetically to the chromosome 18. This sequence can be used to design probes for detecting the presence or absence of a mutation in the wild type PACAP gene. It is also useful for genetic diagnosis of neuropsychiatric disorders like bi- polar affective disorder(BP-I) and schizoaffective disorders like bi- polar which are more valid than current clinical diagnosis based on clinical observation and subjective reports. It is used for identifying compounds that modulate PACAP gene expression which are useful for treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CATGIGGATCACCTGAGGTCAGGAGTTCAAAACCAGCCTGGCCAACATGGTGAAAACCCCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3895 ACCTAGCCCTGATTTTTCAAGACAAACTGAAAACTGGATTTAGATGTGAAATCTTTTTT 3954
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             729 GOCTGATATTTTTTTTTTGAAACAGGTATCACTCTGTTGCCCAGGCTGGAGTACAGTG 788
                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an antisense compound 8 to 30 nucleobases in length targetred to a nucleic acid encoding glycogen synthase kinase 3 alpha. The antisense compound specifically hybridises with and inhibits the expression of glycogen synthase kinase 3 alpha. The antisense compound is useful for the treatment of a diseases associated with glycogen synthase kinase 3 alpha such as diabetes, a neurological disorder, a haematopoietic disorder, a hyperproliferative disorder or a developmental disorder. The antisense compounds may also be used prophylactically to prevent or delay infection, inflammation or tumour formation. The present genomic DNA sequence encodes human glycogen synthase kinase 3 alpha protein
                                                                                                                                                                                                                                                                                                                                Antisense compound 8 to 30 nucleobases in length comprising a compound that its targeted to a nucleic acid molecule encoding glycogen synthase kinase 3 alpha, useful for the treatment of e.g. diabetes and hyperproliferative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         550 ATGIATICATTITCTTICTTITTTGTTGTTGTTTTGAGATAGGGTCTCACTTTGTTA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1561 CCCAAGTAGCTGGGACTACAGGCACTTCCCACCATGCCCAGCTGATTTTTGTATTTTAG

The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer.

                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated mucleic acid molecule (I) comprising a mucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether progression of prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the selecting a composition for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                 The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3683 cdarcricadcricadadacricadcricaddarricaddagarricricardcriradcir

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a

Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous diseases.

Disclosure; SEQ ID NO 2140; 1180pp; English.

The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU23814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperpoliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. Alzbeimer's disease), metabolic arthritis), neurological disorders (e.g. Alzbeimer's disease), metabolic cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The polynucleotides of the
